(54) MESH WOVEN FABRIC

(57) Abstract:

PROBLEM TO BE SOLVED: To obtain a mesh woven fabric for providing a sufficiently reinforcing effect for a long period of time without reducing an appearance quality even in embedding in cement mortar and concrete to be used in cement products and outer walls of building, etc.

SOLUTION: In this woven fabric the woven fabric comprises warp and weft obtained by entangling a glass roving having ≥ 600 tex count with a fiber bundle having 1/5-1/40 the count of the glass roving, is impregnated with a resin, the glass roving is composed of an alkali-resistant glass fiber containing ≥ 14 mass % of ZrO_2 , a mesh interval is ≥ 10 mm and the deposit ratio of the resin is 10-30 mass %.
